CHALLENGE

With an organizational goal to modernize and secure all systems, CPM is planning to replace the backup infrastructures with new technology that will not only improve the resilience and security of the backup infrastructure but also lay the foundation for future use of consolidated file sharing and cloud services if desired. Additionally, CPM wishes to employ Cohesity's Data Management as a Service ("DMaaS") to back up the organization's M365 data, including Exchange Online, OneDrive, SharePoint and Teams.

SOLUTION

CPM currently leverages Veeam in combination with a Synology NAS to protect the critical assets of the organization. To meet organizational goals and leverage a more modern and secure backup solution to protect the organization, CPM has elected to replace the current Veeam/Synology infrastructure with Cohesity's DataProtect technology. The new components to be deployed are listed below.

OUTCOMES

- Implement a new backup and recovery infrastructure using Cohesity Data Protect in both the Primary and DR sites to improve the reliability of recovery services & simplify day-to-day management to fully backup/restore CPM data (servers, databases, files). Enable Cohesity DMaaS to back up CPM M365 data.
- Consolidate backup architecture to a single scale out platform
- Save time and staffing resources on managing convoluted stack of hardware and software point products
- Have immutable backups to protect the business from ransomware event
- Improve recovery time objectives with Cohesity's instant mass restore
- Ability to protect on prem workloads and M365 from a single GUI
- Adopt solution that can be leveraged as a cloud migration tool
- \$60 ROI over 3 years
