CHALLENGE

Debevoise & Plimpton were at the beginning of their Cloud Smart journey and required guidance and education on Azure configuration and deployment best practices.

The company needed a foundational setup for their cloud deployments to ensure they are done correctly from the beginning. They also needed to organize their cloud resources, ensure compliance with security requirements, and manage costs effectively.

SOLUTION

eGroup Enabling Technologies delivered Planning & Design Services (PDS) in alignment with the Microsoft Cloud Adoption Framework (CAF). The engagement included envisioning sessions to align business drivers, organize readiness, and assess cloud team skills.

A comprehensive solution design was developed, addressing virtual assets, backup and disaster recovery strategies, governance security, and cost management. The eGroup team implemented an Azure Landing Zone to organize resources, ensure security compliance, and support scalability.

Additionally, eGroup assisted with the migration and creation of five workloads within the Azure tenant.

OUTCOMES

The team successfully migrated and created five workloads in Azure; validating connectivity and performance for Debevoise & Plimpton.

A comprehensive solution design and highlevel recommendations for Azure deployment, including the configuration of Entra ID, Azure landing zones, and related Azure services were delivered.

Lastly, ongoing support was provided, along with proposals for managed services to ensure continued success in the client's cloud journey.
