CHALLENGE

Medical Teams International is a humanitarian aid organization that provides life-saving medical care to people in crisis, including refugees, disaster survivors, and vulnerable communities worldwide. They focus on delivering essential medical services, equipping clinics, and empowering communities with health knowledge.

Given the nature of their work, Medical Teams International handles sensitive data, including patient information and operational details. The doctors and medical teams are deployed across the globe and work in war torn environments, increasing their risk of cyber threats.

SOLUTION

To ensure the security of their data and protect their technical solutions, Medical Teams International would benefit from implementing a Managed Extended Detection and Response (MXDR) solution. By continuously monitoring, detecting, and responding to threats across the entire IT environment, MXDR provides comprehensive cybersecurity. This level of protection is vital for organizations like Medical Teams International, which need robust security measures to safeguard their operations and the sensitive information they manage.

OUTCOMES

eGroup Enabling Technologies' Managed Security Service Provider (MSSP) solution ThreatDefender MXDR, was successfully deployed to enhance cybersecurity measures for the organization. The implementation included monitoring over 1,100 user endpoints, 800 devices, and three Active Directory Domain Controllers (AD DCs).

This deployment aims to provide comprehensive protection and continuous surveillance of the organization's IT environment, ensuring that potential threats were promptly identified and addressed. By integrating this solution, eGroup Enabling Technologies significantly bolstered the security posture of the organization, enabling it to operate with greater confidence in an increasingly complex threat landscape.
